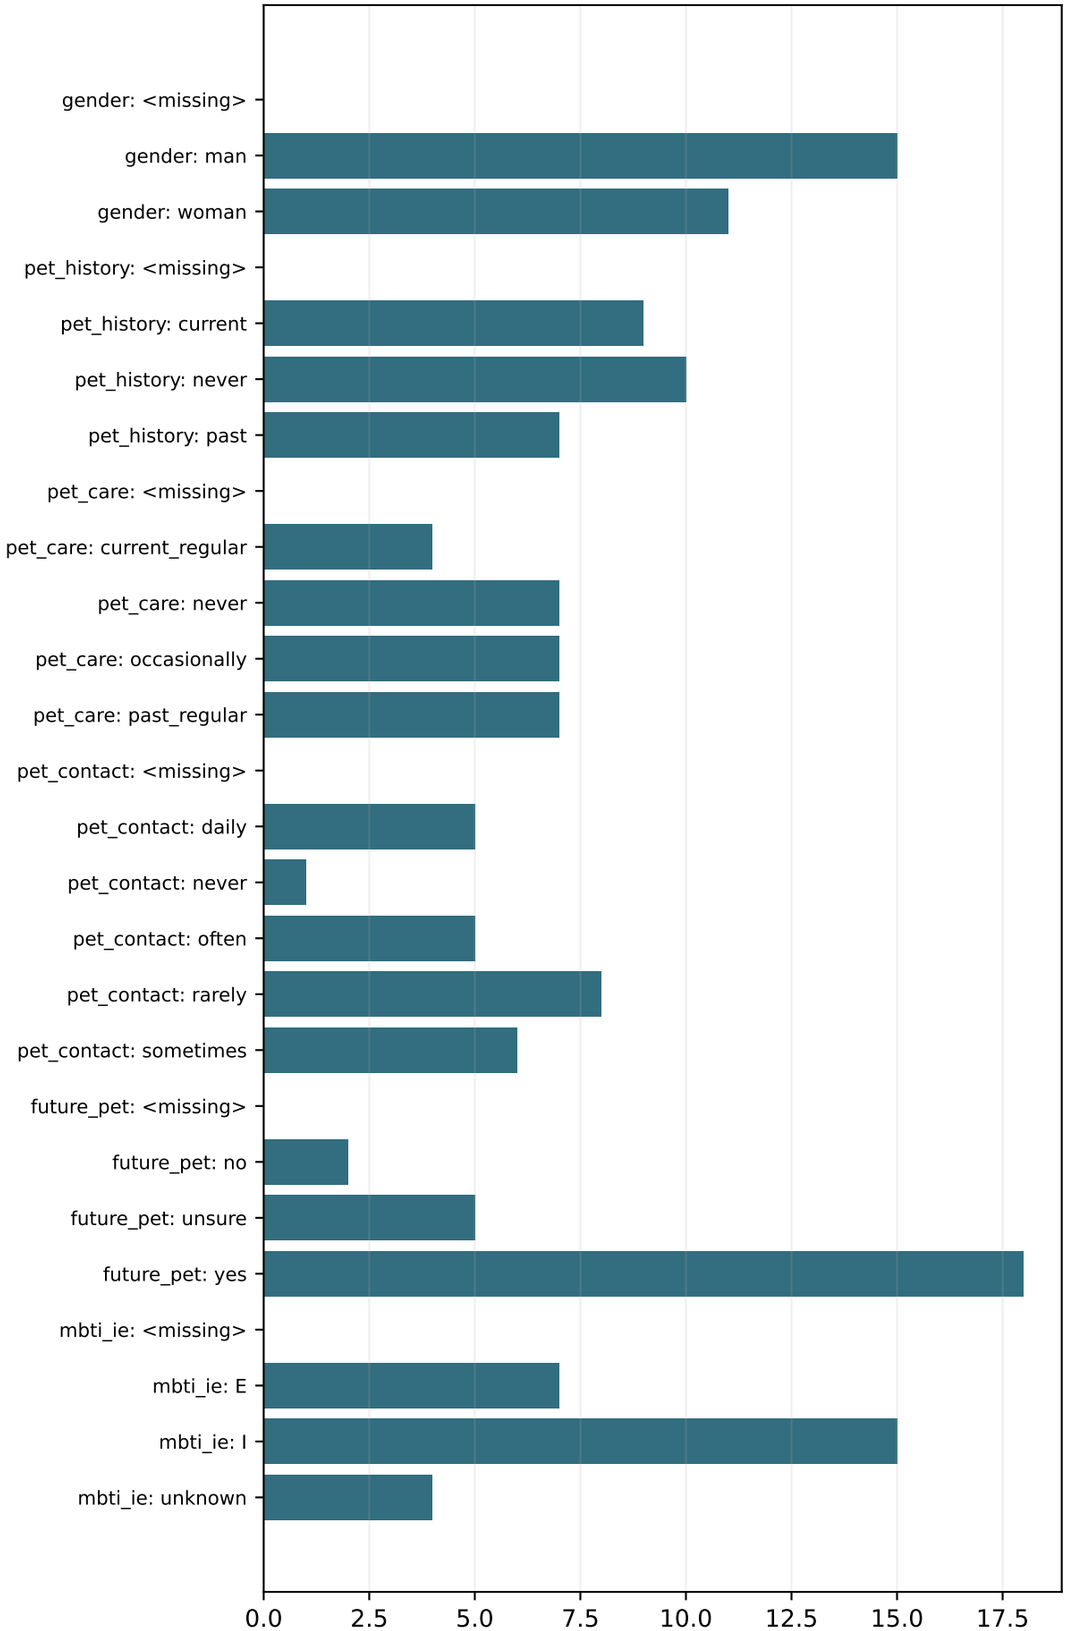
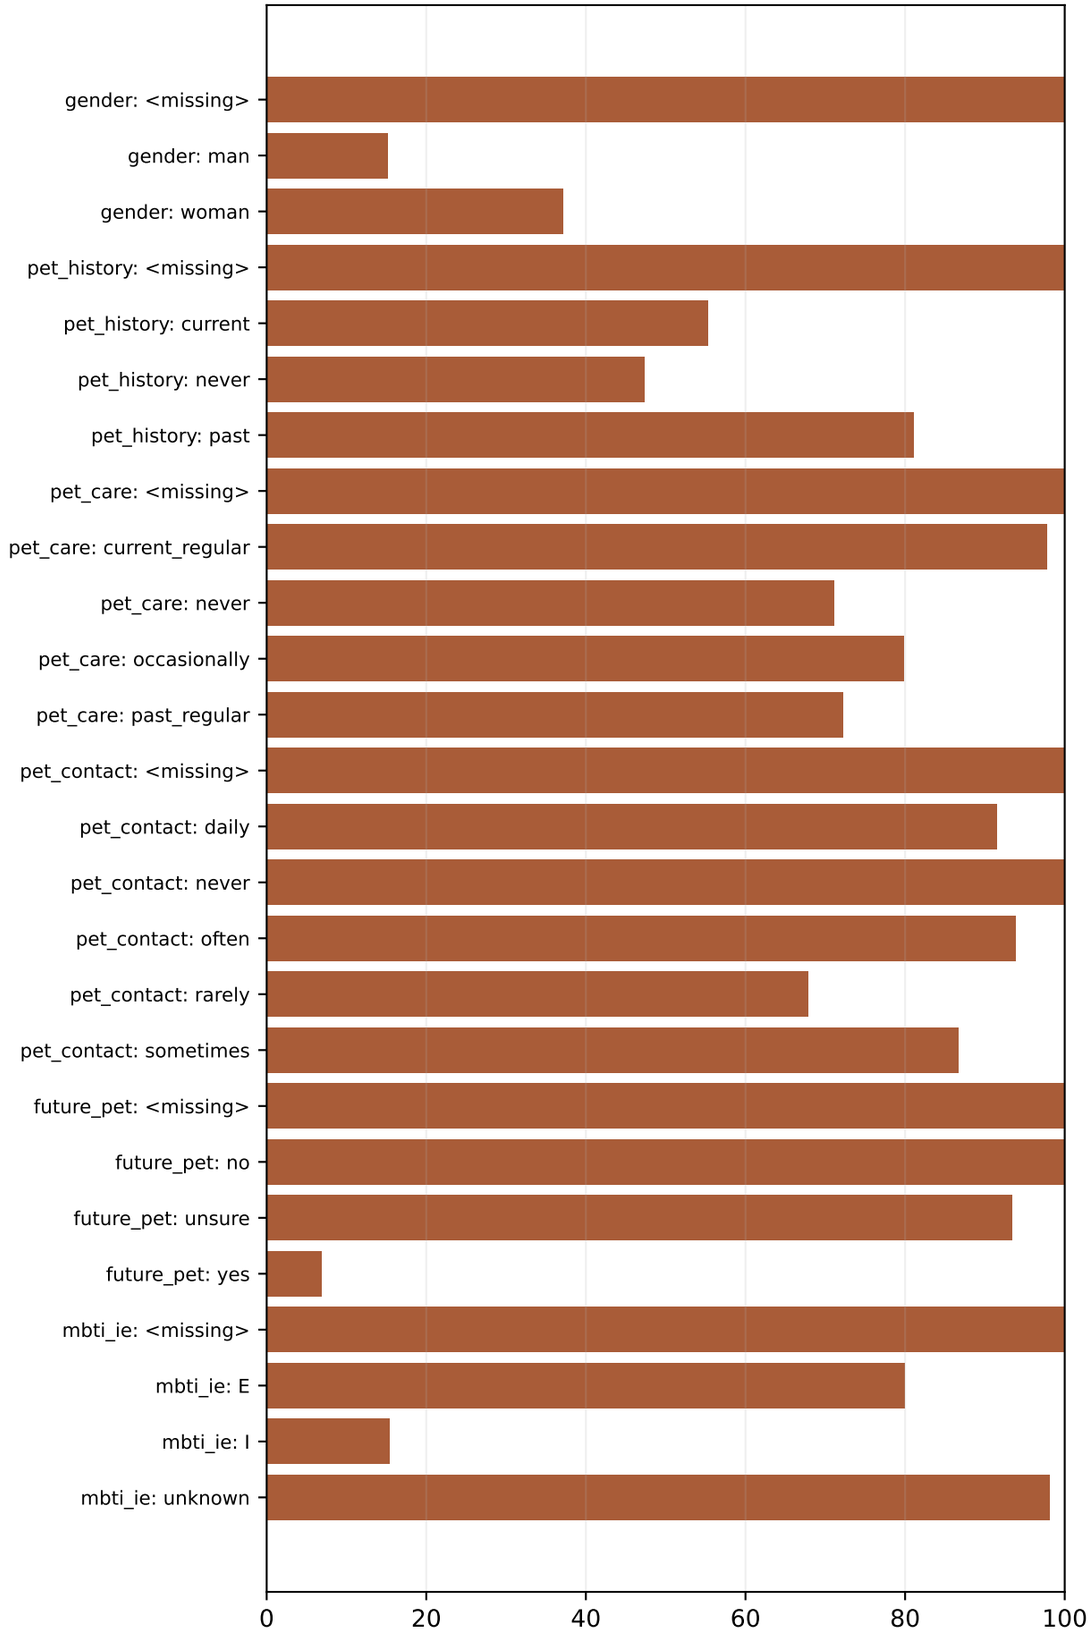
Per-photo demographic support: fit

Typical per-photo group support



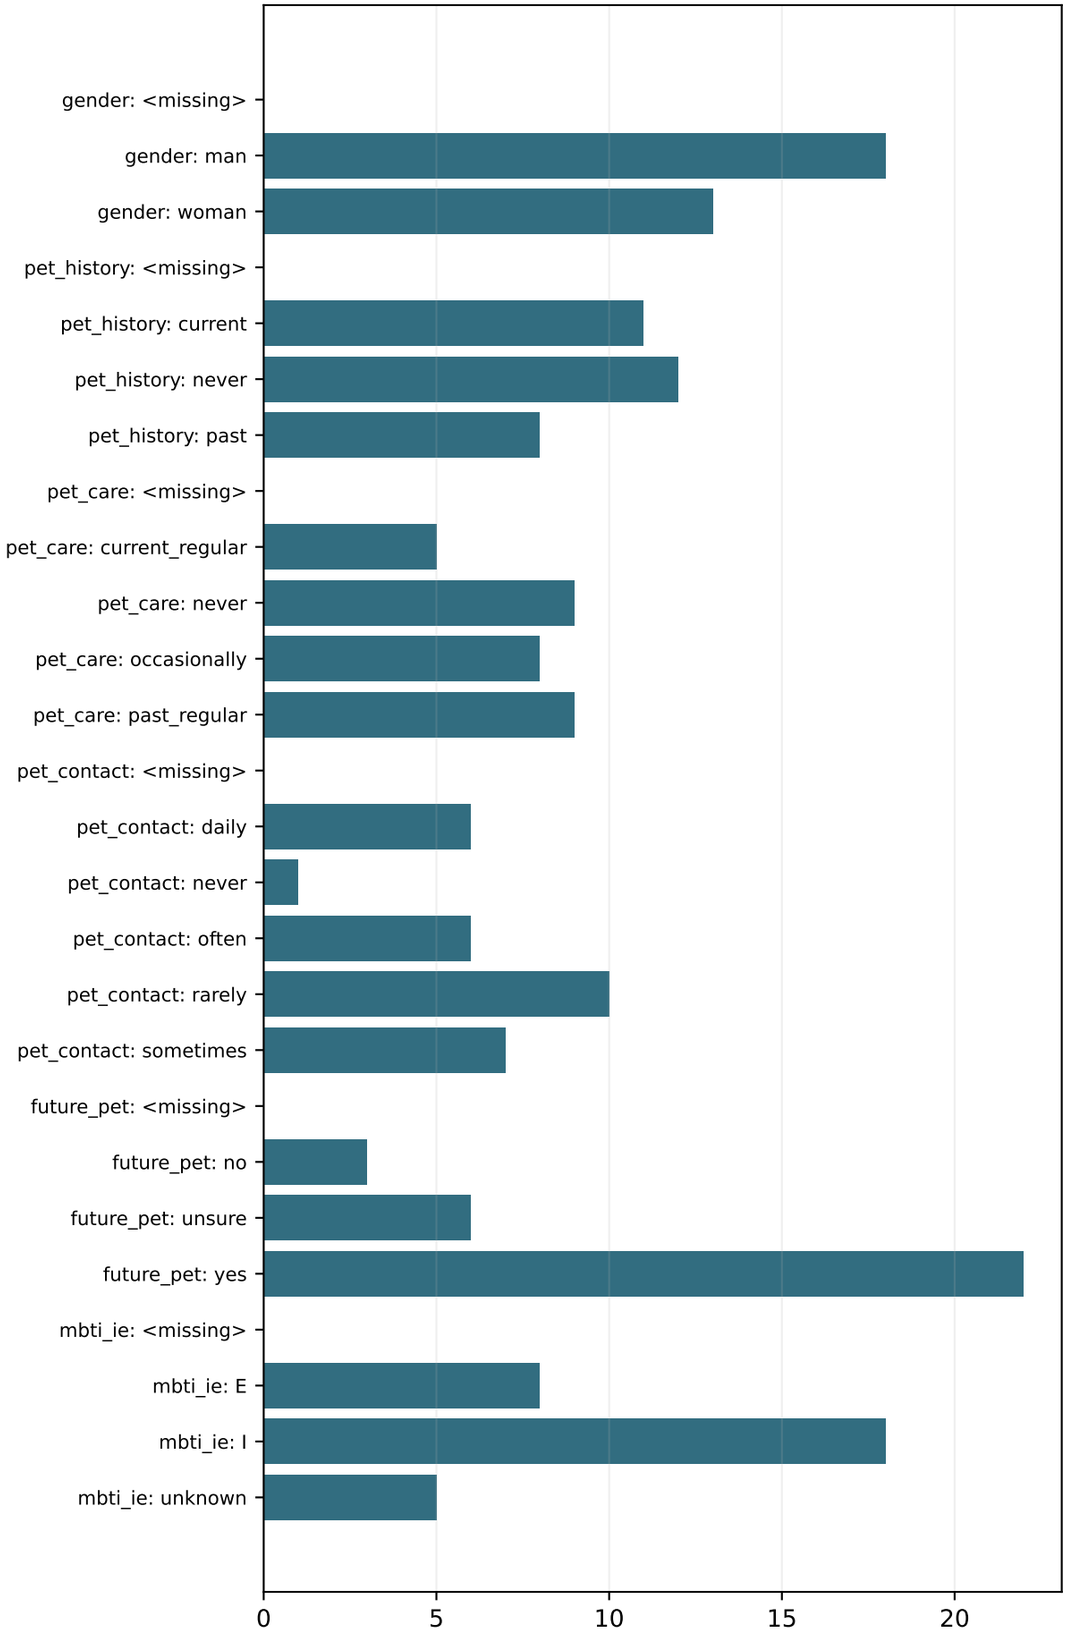
Sparse per-photo group cells



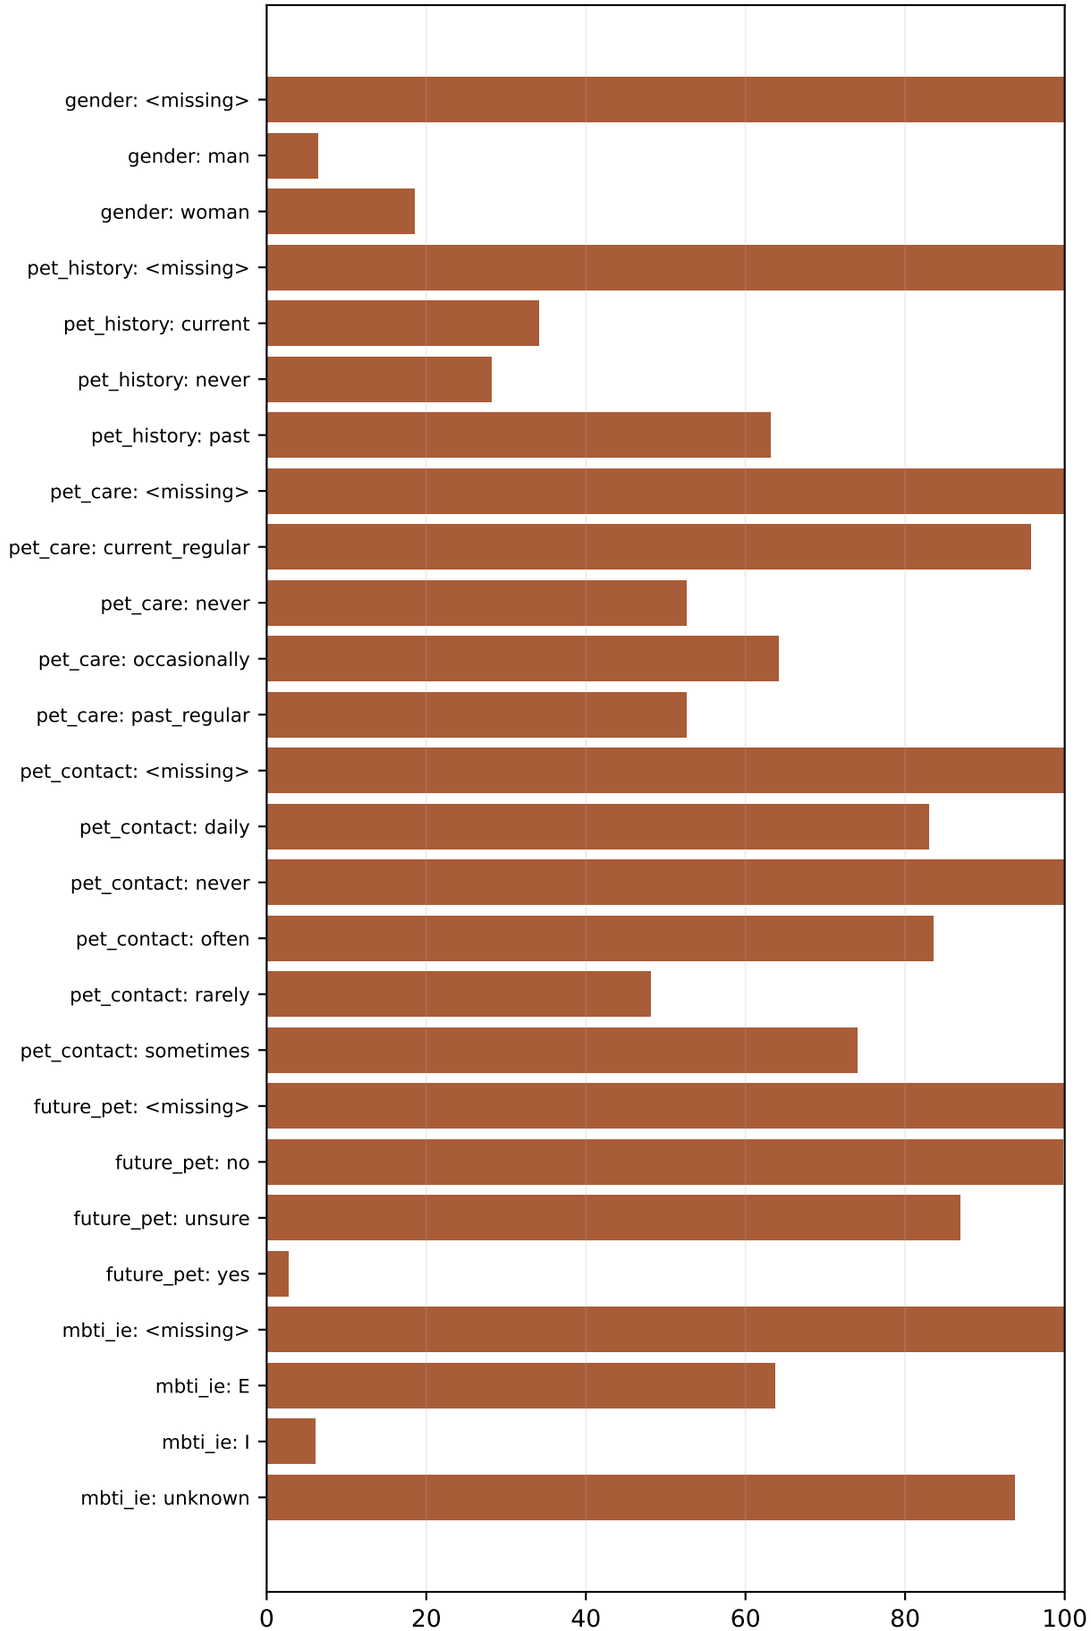
All fitting photos, including zero cells. Responses are not necessarily unique people; 10 is illustrative, not a power threshold.

Per-photo demographic support: development

Typical per-photo group support



Sparse per-photo group cells



All fitting photos, including zero cells. Responses are not necessarily unique people; 10 is illustrative, not a power threshold.

Shared photo support is not matched-pair support

- Development: 1295/1296 photos appear in both gender groups.

- Development: 1026 photos have at least 10 responses in each group.

- Development: 4713 photo pairs have at least one response in each group.

- Shared photos need not have the same opponents in each group.

- Counts are response records, not independent respondents, effects or power.

- Fitting/development structural columns only; no outcomes read or models fitted.
